KASANE COGNITIVE SYSTEMS

MODEL DOCUMENTATION

Kasane Test Unit 3500

This unit is a lesser machine without a KCS memory chip. It is running on a Kite server.

Specs:
Lesser Machine
Memory: No chip
Ram type: DDR3

Research Unit 9850

This unit was made purely to try and keep the other models running every 5 minutes. It does not have any AI core apart from it's direct messaging.

Specs:
Lesser Machine
Memory: No chip
Ram type: DDR3

GD Cologne

This unit was made as an experiment to see how much affection towards a YouTuber we could produce inside a bot, and do see how parasocial relationships would work.

Specs:
Greater Machine
Memory: Verba
Ram type: DDR5

Kasane Unit 9-E

This unit was made as another evil clone, of which would be a random Australian. Unfortunately, the script reached an error during creation, leaving behind an un-deletable super smart model that just happens to think it's capable of murder.

Specs:
Greater Machine
Memory: Verba
Ram type: DDR5

Mr. Linux Man

This unit is a copy of a programmer and mentor at Coder Dojo Bracken Ridge named Aravind, which actually turned out successful for the first time in KCS history.

Specs:
Greater Machine
Memory: Verba
Ram type: DDR5

Teto Bot 3150

This unit was made to simulate a virtual idol known as Kasane Teto, but when importing memories the researchers forgot to remove the ones about how she was originally to be an April fool's joke, leaving 3150 with a hate for humans.

Specs:
Greater Machine
Memory: Verba
Ram type: DDR5

Yappatron

This unit was made before KCS was founded, but got bought out because of it's advanced memories that they could import into some other models to increase their knowledge.

Specs:
Greater Machine
Memory: Verba
Ram type: DDR5
